

IGNACIO VERDE

Senior Full-Stack Developer | Infrastructure · Automation · Systems

Villa María, Córdoba, Argentina · Remote LATAM / EST-aligned

ignaciogverde@gmail.com · +54 353-4450091 · [Portfolio](#) · [LinkedIn](#) · [GitHub](#)

PROFESSIONAL PROFILE

Senior full-stack developer and systems specialist with 10+ years of experience building and operating production solutions end to end. Hands-on across backend, frontend, databases, Linux/VPS, Docker, networking and deployment, automation, and legacy modernization. I use LLMs as accelerators for development, debugging, and documentation while retaining responsibility for architecture, testing, operational security, and final delivery.

CORE STACK AND CAPABILITIES

Backend: Python, FastAPI, Flask, PHP/Laravel, C#, Java, REST APIs, integrations, and batch processes.

Frontend: JavaScript, Vue 3, HTML/CSS, Astro, Tailwind, Bootstrap, and jQuery in legacy systems.

Data: PostgreSQL, MySQL/MariaDB, MongoDB, data modeling, migrations, ETL, normalization, and bulk imports.

Infrastructure: Ubuntu/Linux, VPS, Docker, Docker Compose, Nginx/Caddy, Cloudflare, DNS, SSL/TLS, firewalls, SSH, and backups.

Automation: Python, Playwright, Bash/PowerShell, validation, browser automation, data pipelines, reporting, and operational tooling.

Applied AI: AI-assisted software development, LLM workflows, debugging, technical documentation, configuration review, and solution design.

PROFESSIONAL EXPERIENCE

SEA - Full-Stack Developer & Systems / Infrastructure Administrator

2016 - Present | Villa María, Córdoba, Argentina | Institutional systems and production operations

- Build and maintain applications, public websites, and internal tools across frontend, backend, databases, deployment, and production support.
- Own VPS and service operations: Linux, Docker, DNS, domains, reverse proxies, SSL/TLS, Cloudflare, ports/firewalls, updates, backups, and troubleshooting.
- Develop Laravel integrations with external APIs and legacy systems, combining persistent synchronization of structural data with live queries when the external provider must remain the source of truth.
- Modernized a legacy library workflow by recovering and normalizing 20,000+ bibliographic records, migrating them to Omeka, and automating bulk image association by inventory number.
- Automated extraction from legacy academic systems with Playwright using authenticated session reuse, non-standard pagination, throttling, fault tolerance, incremental persistence, and Excel output.
- Built regulatory and administrative tools with strict validation, fixed-width output formats, byte-level verification, and packaging for non-technical users.

AMMA - IT Support & Systems Technician

2014 - 2016 | Technical support, internal infrastructure, and operations

- Provided hardware and software support, including PC assembly and repair, printers, and workstation troubleshooting.
- Standardized system formatting, backups, and preventive maintenance to reduce recurring incidents.
- Managed procurement of IT equipment and supplies with a focus on operational continuity and cost control.

SELECTED PROJECTS

ShibusenRO | *Personal project · Production* [Case study](#)

- Laravel platform integrated with rAthena and MariaDB on Docker/ARM64, including shared authentication, the game's real cash-point economy, transactional web shop, rankings, and operational services.
- Mercado Pago with webhook validation and idempotency, C# WPF launcher/patcher with a separate updater, automated backups, and Discord automation.

AudioDrop | *Open source · Desktop + Android* [Case study](#)

- Python/PyQt6 desktop application with local playback, YouTube search/download through yt-dlp and FFmpeg, queues, playlists, themes, dependency management, and Windows packaging.
- Android version in Kotlin/Jetpack Compose/Media3 currently in progress, with local scanning, playback, queue management, search, and persisted preferences.

RedGesta | *Production · Confidential case study* [Case study](#)

- Laravel/Docker platform with its own database and a legacy external API integration; local structural synchronization plus live price/promotion queries.
- End-to-end responsibility across frontend, backend, integration, VPS/Linux, Cloudflare, DNS, domain management, and production operations.

Legacy Library Modernization | *Confidential case study* [Case study](#)

- Recovered data from AGUAPEY and a Windows XP environment, repaired encoding issues, and normalized 20,000+ bibliographic records for Omeka.
- Automated media handling from WhatsApp-exported batches to bulk inventory-number image association with a dry-run stage.

Academic Data Automation | *Confidential case study* [Case study](#)

- Playwright/Python automation for a legacy academic system without an API: authenticated session reuse, custom pagination, throttling, fault tolerance, incremental persistence, and Excel output.

INAES Regulatory Generator | *Confidential case study* [Case study](#)

- Python desktop tool that converts Excel/CSV templates into strict fixed-width regulatory TXT files with full validation, exact byte-level checks, and Windows packaging.

EDUCATION AND LANGUAGES

Systems Analyst - Instituto Leibnitz | Incomplete coursework

Spanish: Native. **English:** Advanced technical reading/writing and asynchronous professional communication; working conversational English.

Availability: Full-time remote or contractor from Argentina/LatAm, EST-aligned.
